Elvacite® 2041

Acrylic Resin

Elvacite® 2041 is a high molecular weight methyl methacrylate polymer. It is used in many coatings applications providing maximum abrasion resistance, block resistance, and slip.

Performance Features and Key Benefits

- Coatings for vinyl to provide abrasion resistance, block resistance, and slip
- Spray Lacquers for Plastics

Typical Properties[a]	
Appearance	Solid bead
Specific Gravity, 25° C	1.19
Glass Transition Temp, onset (calculated)	105°C
Molecular Weight (Mw)	300,000
Acid Number (mg KOH/g Resin)	0

a) Typical physical properties listed are approximate values and should not be considered manufacturer's release specifications. Manufacturer's release specifications are subject to change without notice, please contact your Elvacite® representative for the latest product specification details.

Preparing Solutions

Elvacite® resins dissolve at room temperature but require constant agitation to prevent solvent-swollen granules of polymer from forming agglomerates and sticking to the walls of the vessel. Important: The polymer beads should be sifted directly into the vortex of the stirred solvent to speed wetting-out and dispersion. Continuous low-shear agitation for periods of 1-12 hours, depending on the grade and concentration of resin, is recommended.

After the solution appears clear in the tank, a sample should be spread out on a Leneta card or glass. After the solvent evaporates and a film forms on the card or glass, there should not be any resin seeds. If there are any seeds, the tank should be agitated further to fully dissolve the resin. Tank agitation should not be stopped (except for sampling) until the film test indicates there are no resin seeds. Any cloudiness or residue may indicate that some polymer remains undissolved. The presence of water in the system can also cause cloudiness.

Solution time can be reduced by heating; most common solvents can be heated to approximately 49°C (120°F) without the need for reflux equipment. High-shear agitation also cuts dissolving time, but requires care to avoid overheating and excessive solvent loss.

Typical Formulations

The following formulation is given as a starting point only. The final formulation will be determined by the coating properties desired.

Typical Vinyl Topcoating Lacquer

Ingredient	**% by Wt.**
Elvacite® 2041	2.96
Methyl Ethyl Ketone	12.99
"Bakelite" QYNV vinyl chloride dispersion resin	6.99
Tetrahydrofuran (THF)	63.06
	100.00

Non-volatiles (solids), % by weight	10.0
Non-volatiles (solids), % by volume	6.7

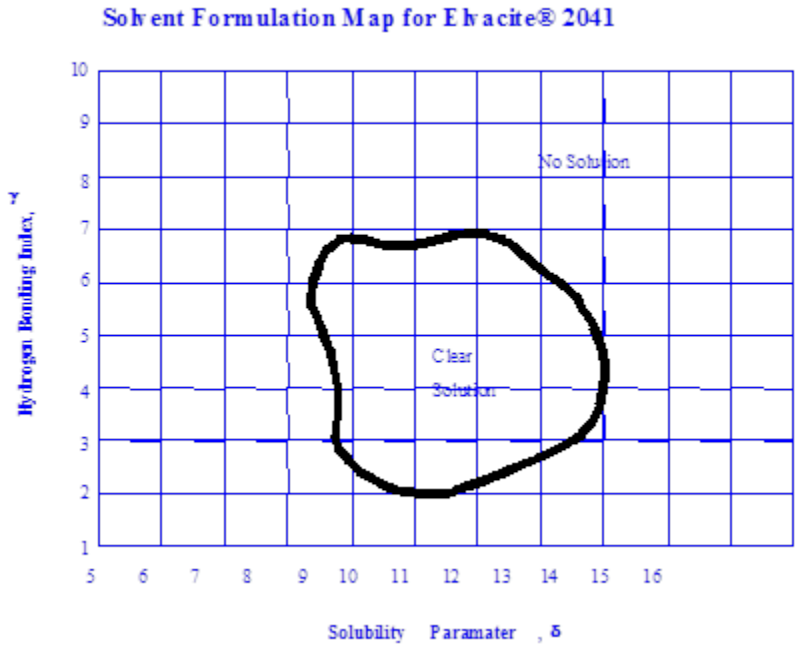
Preparation – Dissolve Elvacite® 2041 in MEK, dissolve vinyl resin in THF, and combine.

Solvent Solubility

Elvacite® 2041 is Soluble at 20% Solids in:

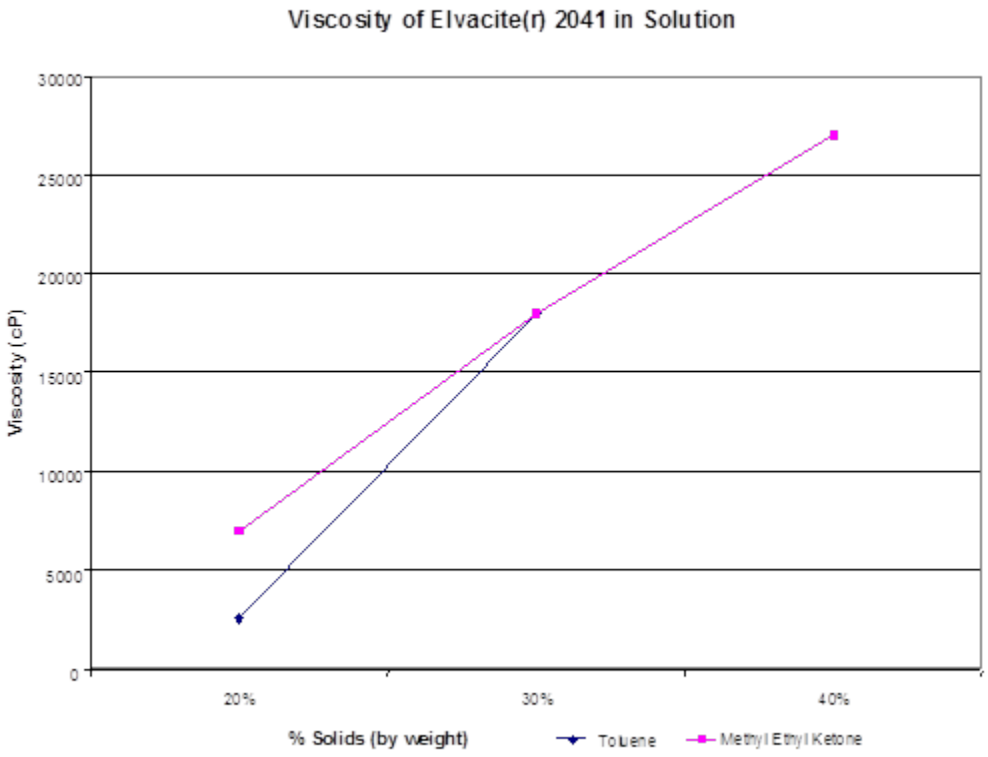
Dimethyl formamide (DMF); Methylene chloride; Ethylene dichloride; Methyl formate; Ethyl acetate; Butyl lactate; Tetrahydrofuran (THF); Acetone; Methyl ethyl ketone; Acetonitrile; Nitromethane; Nitroethane.

The Solvent formulation map below can be used to predict, with reasonable assurance, the solubility of Elvacite® 2041 in specific not listed above or blends.



Viscosity

Elvacite® 2041 is a high molecular weight methyl methacrylate polymer. The following chart illustrates typical viscosities of Elvacite® 2041 by varying both solvent and resin concentration.



Resin Compatibility

Elvacite® 2041 is compatible with the following Elvacite® Resin Grades: 2008, 2009, 2010, 2021, and 2013. It is also compatible with the other types of resins, as illustrated in the following table:

Blending Resin	Description	Form of Blended Resin Tested	Supplier	Elvacite / Blending Resin (by solids weight)		
Alkyd				75/25	50/50	25/75
Aroplaz 1271	Long linseed drying oil	30% in MEK	Reichold Chemical Inc.	---	I	I
Aroplaz 1351	Long castor nondrying oil	30% in MEK	Reichold Chemical Inc.	---	C	H
Chempol 13-1410	Safflower drying oil, acrylate mod	50% in Xylene	Cook Composite & Polymer	---	I	I
Paraplex RG-2	Nondrying oil, sebacic	30% in MEK	C.P. Hall Co.	I	I	I
Blagden 3105	Short coconut nondrying oil	60% in Xylene	Blagden Chemicals Ltd.	---	H	H
Cellulosic						
Cellulose acetate 39-5-5B		30% in Acetone or MEK	Hoechst Celanese Corp.	I	I	I
Cellulose Acetate Butyrate, ½ - Sec		30% in MEK	Eastman Chemical	I	I	I
Ethyl Cellulose N-7		30% in MEK	Hercules Inc.	I	I	I
Nitrocellulose "RS", ½-sec Isopropyl		MEK/alcohol soln.	Hercules Inc.	C	C	C
Epoxy						
Epon 828		100% Resin	Resolution Performance Prod.	C	---	C
Epon 1001		30% in MEK	Resolution Performance Prod.	C	C	C
Elastomers						
EMD-504	Polyisobutylene	30% in Toluene	Exxon Chemical Co. USA	I	I	I
Hypalon 30	Clorosulfonated polyethylene	15% in Toluene	Dupont Polymers	I	I	I
Neoprene AC-Soft	Polychloroprene	15% in Toluene	Dupont Polymers	I	I	I
Rosin Derivatives						
Ester Gum 8L		30% in MEK	Hercules Inc.	H	I	I
Pentalyn 255	Pentaerythritol ester	30% in MEK	Hercules Inc.	---	H	H
Pentalyn 830	Pentaerythritol ester	30% in MEK	Hercules Inc.	---	H	H

(C= Clear solution, H = Hazy solution, I = Insoluble)

Vinyl Chloride Resins						
UCAR® Sol Vinyl VAGH	Copolymer	30% in MEK	Union Carbide Corp.	C	C	C
UCAR® Sol Vinyl VMCH	Copolymer	30% in MEK	Union Carbide Corp.	C	C	C
UCAR® Sol Vinyl VYHH	Copolymer	30% in MEK	Union Carbide Corp.	C	C	C

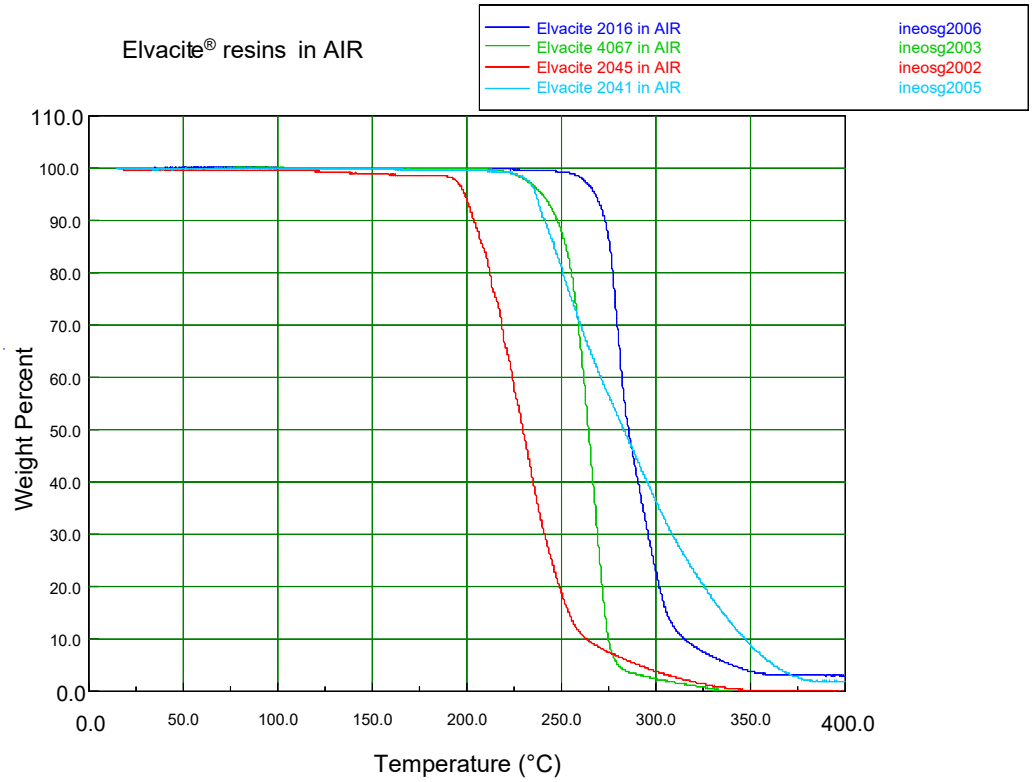
Sample Mass = 10-20 mg

Heating Rate = 2°C/minute

Purge Rate = 5.4 Liters/Hour



COMPLIANCE WITH FDA REGULATIONS

Pasadena, Texas, USA Grade: ELVACITE® 2041

Issue date: February 2009

We, MITSUBISHI CHEMICAL AMERICA, INC., Specialty Resins Division, confirm that Elvacite® 2041 complies with the compositional requirements of the following United States of America's Food and Drug Administration (FDA) regulations.

Elvacite® 2041 is cleared for use under the FDA 21 CFR 175.105 for adhesives used as components of articles intended for use in the packaging, transporting, or holding food.

Elvacite® 2041 is cleared for use under FDA 21 CFR 175.300 in resinous and polymeric coatings used as the food contact surface of articles intended for use in producing, packing, processing, preparing, treating, packaging, transporting, or holding food. The coating in its finished form in which it is to contact food is subject to a restriction on its chloroform soluble extractives.

Compliance with the limitation on extractives can only be demonstrated by tests carried out in the final article.

Elvacite® 2041 is cleared for use under FDA 21 CFR 175.320 in resinous and polymeric coatings for polyolefin films, provided it is intended for repeated food contact use as specified in FDA 21 CFR 175.300(a).

The coating in its finished form in which it is to contact food is subject to a restriction on its chloroform soluble extractives.

Compliance with the limitation on extractives can only be demonstrated by tests carried out in the final article.

Elvacite® 2041 is cleared for use under FDA CFR 176.170 as a component of the uncoated or coated food contact surface of paper and paperboard intended for use in producing, manufacturing, packing, processing, preparing, treating, packaging, transporting or holding aqueous and fatty foods.

Compliance with the limitation on extractives can only be demonstrated by tests carried out in the final article.

Elvacite® 2041 is cleared for use under FDA 21 CFR 176.180 as a component of the uncoated or coated food contact surface of paper and paperboard intended for use in producing, manufacturing, packing, processing, preparing, treating, packaging, transporting, or holding dry food.

Elvacite® 2041 is cleared under FDA 21 CFR 177.1010 as semirigid and rigid acrylic plastics articles intended for use in contact with food. The semirigid and rigid acrylic plastics in the finished form in which they are to contact food are subject to limitation on extractives

Compliance with the limitation on extractives can only be demonstrated by tests carried out on the final article.

This statement of compliance is correct at the date of issue.
As food contact regulations and product formulations are subject to change, it is the user's responsibility to ensure that they are in possession of a current statement of compliance.
