#### SECTION 4 FIRST AID MEASURES

**Eye contact** Rinse thoroughly with plenty of water for at least 15 minutes and consult a physician.

- **Skin contact** Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. When symptoms persist or in all cases of doubt seek medical advice. Wash contaminated clothing before re-use.
  - **Inhalation** Remove to fresh air. If breathing is irregular or stopped, administer artificial respiration. Call a physician immediately.
  - **Ingestion** If swallowed, call a poison control centre or doctor immediately. Do not induce vomiting without medical advice. Never give anything by mouth to an unconscious person.

#### SECTION 5 FIREFIGHTING MEASURES

#### FLAMMABLE PROPERTIES

extinguishing media

Fire/explosion NFPA Class IIIB combustible liquid.

- Suitable Water spray, Foam, Dry chemical, Carbon dioxide (CO2)
- Protective equipment Wear self-contained breathing apparatus for firefighting if necessary. and precautions for firefighters
- **Further information** Keep containers and surroundings cool with water spray. Do not use a solid water stream as it may scatter and spread fire. Collect contaminated fire extinguishing water separately. This must not be discharged into drains.

#### SECTION 6 ACCIDENTAL RELEASE MEASURES

Methods and<br/>materials forEvacuate personnel to safe areas. Remove all sources of ignition. Contain spillage, and<br/>then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous<br/>earth, vermiculite) and place in container for disposal according to local / national<br/>regulations (see section 13). Do not flush into surface water or sanitary sewer system.

#### SECTION 7 HANDLING AND STORAGE

**Safe handling advice** Take precautionary measures against static discharges. Storage/Transport Ambient pressure Load/Unload 5°C temperature 40 °F Storage and handling Suitable: Carbon steel coated with baked phenolic. Any moisture may cause rusting of materials carbon steel. If product is moisture free, uncoated carbon steel tanks. Further information Mix thoroughly before use. When stored in the liquid form, ethoxylates should be padded on storage conditions with a dry inert gas, such as nitrogen, to prevent oxygen or air from entering the tank. Prolonged storage in the presence of air or oxygen may cause product degradation. Oxidation is not expected when stored under a nitrogen atmosphere. Inert gas blanket and breathing system needed to maintain color stability. Use dry inert gas having at least -40°C (-40°F) dew point.

#### SECTION 8 EXPOSURE CONTROLS/PERSONAL PROTECTION

#### ENGINEERING MEASURES

Ensure adequate ventilation, especially in confined areas. Trace amounts of ethylene oxide may be present in the product and could accumulate in vapor spaces of storage or transport vessels.

#### PERSONAL PROTECTIVE EQUIPMENT

- Eyes Wear as appropriate: Goggles, Face-shield
- **Skin** Full protective clothing, chemical boots, and chemical gloves. High standards of skin care and personal hygiene should be exercised at all times.
- **Inhalation** Use respirator when performing operations involving potential exposure to vapour of the product. Use NIOSH approved respiratory protection.

#### **EXPOSURE GUIDELINES**

There are no exposure limits established for this product. Trace amounts of ethylene oxide may be present in this product., The ethylene oxide in this product is not expected to result in significant exposures or present a health hazard.

### MARLIPAL® O13/79 Ethoxylate

Conditions to avoid	Reacts slowly with air or oxygen. Storage under heated conditions in the presence of air or oxygen increases reaction rate. For example, after storing at 95°F/35°C for 30 days in the presence of air, there is measureable oxidation of the ethoxylate. Lower temperatures will allow for longer storage time and higher temperatures will shorten the storage time if stored under an air or oxygen atmosphere.
